Perfecting motion **blum**

CLIP top BLUMOTION

Now totally integrated

The CLIP top BLUMOTION hinge is setting new benchmarks:

This sophisticated technology for perfect motion is now integrated into the smallest possible space – directly in the hinge boss. Because of this, CLIP top BLUMOTION opens up so many more design possibilities for doors.

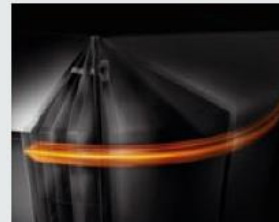

CLIP top BLUMOTION is also perfect for thicker doors: the new pivot points ensure adequate clearance between the cabinet face & door during opening.

For high quality of motion for small or light doors, the BLUMOTION function can be easily deactivated if required – via a switch on the hinge boss.

High quality down to the last detail

Silent and effortless closing – regardless of the closing speed or door size.

Switch for BLUMOTION deactivation

New pivot points ensure a smaller side gap even for thicker doors.

BLUMOTION is now integrated into the interior of the hinge boss.

More quality of motion
for your furniture
